(51) International Patent Classification ⁶ : B43M 3/04, B65H 5/16	A1	(11) International Publication Number: WO 99/65707 (43) International Publication Date: 23 December 1999 (23.12.99)
(21) International Application Number: PCT/IB99/01171 (22) International Filing Date: 27 May 1999 (27.05.99) (30) Priority Data: 198 27 235.9 18 June 1998 (18.06.98) DE (71) Applicant (for all designated States except US): BELL & HOWELL GMBH [DE/DE]; Gruner Weg 8, D-61169 Friedberg (DE). (72) Inventors; and (75) Inventors/Applicants (for US only): STING, Martin [DE/DE]; Oberlindau 77, D-60323 Frankfurt (DE). BRAUNEIS, Axel [DE/DE]; Kirchgasse 30, D-35516 Munzenberg (DE).	(81) Designated States: CA, US, European patent (AT, BE, CH, CY, DE, DK, ES, FI, FR, GB, GR, IE, IT, LU, MC, NL, PT, SE). Published With international search report.	

(54) Title: MAIL-PROCESSING MACHINE

(57) Abstract

In the case of a mail-processing machine having a conveying path (1) which contains a circulating conveying chain and conveys onto a handling station (5), easy changeover to a variety of processing tasks and good adaptability to constricted space conditions are achieved in that, by a switchable actuating arrangement, manipulator fingers (19) articulated on a manipulator hand (13), in the handling station (5), can be switched both into the operating position both for the forward stroke of the manipulator hand and for the return stroke of the manipulator hand and into the return position both for the return stroke of the manipulator hand and for the forward stroke of the manipulator hand. Free through-passage-channel areas (32, 33) for sheet like article and sets thereof which are to be processed further or are to be inserted into envelopes are provided in the handling station, not only with regard to the direction (F) from the feeding conveying chain and to a laterally adjacent first processing arrangement but also in the opposite direction perpendicular to the feed direction of the first conveying chain.
